

## **The simple and affordable way to clean your coolant on multiple machines.**

The ECO-4 Oil Separator is a mobile device designed for cleaning your coolant. WE all know that COOLANT in the manufacturing and production process will inevitably become contaminated with dirt oil, grease and particles of machine materials. This will lead to the valuable loss of properties within the coolant for cooling and lubrication, which, in turn will quickly lead to reduction in quality of finished components and service life of the machine tool.

Contamination of coolants are also the ideal breeding ground for bacteria and fungi that are responsible for the unpleasant smells and help increase the risk of infection to machine operatives.

These problems can be resolved with the ECO-4 Oil Separator...

- ECO-4 cleanses the coolant from oil and other contaminants
- Provides a better work environment for the machine operator
- Prolongs tool and cutter life
- Helps reduce Oil Mist
- Extends the periods between drain and replace, clean and re-fill of coolant
- Helps remove a source of nourishment for the bacteria that thrives in dirty coolant
- Reduces unpleasant odours and risk of skin infections
- European manufactured

### **Specification**

Dimensions	1020 x 900 x 500mm (Height x Length x Width)
Weight	89kg
Coolant thru-put	200 - 450 litres/hour
Working temperature	< 60°C
Allowed pH	5 - 9.5 pH
Air pressure requirement	3 - 6 bar
Pre-filter	300 microns
Separated oil container	20 litres
