

Nortek Material Storage Racks

Vertical Storage Rack

Two meter high vertical storage is made up of four 500mm wide bays

Each bay has 500mm square sheet steel base tray and a welded tubular steel upright frame

Mid way arms are provided with material retaining drop latch rail.

The four bays, whilst being connected via the base trays are also connected by a longitudinal top member.

Please Note: This rack is not designed to be free-standing and requires fixing both to the floor and wall.

Sheet Material Storage Rack

Fully welded heavy duty tubular steel framework and a continuous panel base shelf

The rack is divided into five 300mm wide storage sections

Please Note: Recommended that this rack is fixed to the floor.

Horizontal Storage Rack

Racking is made up of fully welded heavy duty steel frameworks which have five pairs of 350mm long cantilever support arms (including the base arms) in the height.

Each bay is spaced out so that the arms are equally spaced out.

Please Note: This rack is not designed to be free-standing and requires fixing both to the floor and wall.
