

MACC Special 280 M Pull Down Bandsaw

The basic characteristics of the machine, such as rigidity of the blade support, flywheel dimension, band guides, and band stretching, have been thoroughly studied to avoid breaking of the blade, increase its durability, and improve linearity and time of cutting.

Machine Features

Vertical rotation on bolt with adjustable tapered bearings without backlash

High-capacity band control by two-speed motor and special reducer with bronze gear and tempered and ground worm screw

Appropriately dimension flywheels

Strong band guides with tight stress-raiser bearings and adjustable widia tips

Band stretching is obtained by electro-mechanical blade tensioner with micro switch

Vice with a device for swift locking by eccentric means

Accident-preventing devices on the flywheel casing, on the control handle, and on the blade

Cutting thickness 1,2mm

Adjustable stop for cuts of the same size

24 V low tension plant

Cutting range 0° - 60° right

0,06kW power-driven pump for band cooling
